

YINGJIE SUN

Industrial & Product Designer

Product form, CMF and use

I design physical products, visual systems and AI-native workflows, connecting form, CMF, 3D and brand. I start with use and materials, then develop ideas through models, prototypes and comparison.

Projects and reading paths

Select a project to open its case. Original boards are preserved; English captions explain their context. Roles, stages and source notes accompany each case.

04 Aluminum Lighting System

12 GO GLOW · Modular Personal Care

08 HUUH CARE · Pediatric Breath-Test Concept

16 PLUMBER · Sewer Crisis 24h

From form to system

I design physical products, visual systems and AI-native workflows, connecting form, CMF, 3D and brand. I start with use and materials, then develop ideas through models, prototypes and comparison.

Understand use and constraints, then compare form, materials, hierarchy and interaction. Models and prototypes make choices discussable. AI supports references, variations and workflows; people retain judgment and verification.

FORM / SYSTEM / INTELLIGENCE

2026.02 — Present

Hangzhou Liling Enterprise Services

Brand design & project coordination

2025.08 — 2026.01

HannStar Board

Design systems engineering designer

2025.03 — 2025.12

BENWU

3D designer

2023.12 — 2025.02

Hunan Ouyin Culture & Media

Design assistant

2021.09 — 2025.06

Changzhou Institute of Technology

Bachelor's degree in Product Design

01

Aluminum Lighting System

One section across different uses: a family of table, floor, wall and pendant lights.

My role

BENWU team · 3D design & visual presentation

Stage

Lighting family and spatial presentation

This page is a concept, prototype or research record in the personal archive; visual material is not treated as proof of official collaboration, production, launch, performance or commercial outcomes.

Credits and context / Level B

Collaboration with the BENWU team; BENWU EDITION branding and trademarks belong to their respective rights holders

AI / Human: AI is described only where the current project record supports it; humans remain responsible for framing, selection, fact checking, design judgment and release.

Human review: Review of source, attribution and public permission; Human checks on design judgment, state and boundaries; Pre-release checks on assets, copy and links

[Read the complete case](#)

A shared section across different uses

Silver table lamp with a circular base beside an open book on a blue surface

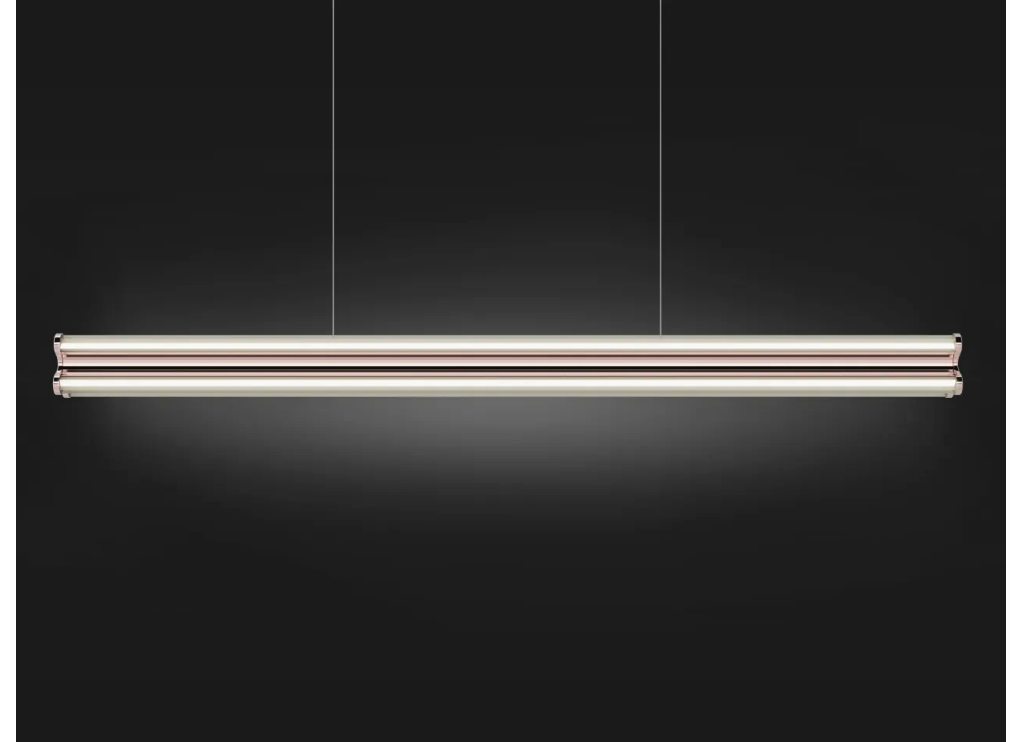

Full view of a silver floor lamp against black

Table and floor lights share a linear body, luminous strips and distinctive ends. Support, length and direction change around the use scenario.

Separate material and functional cues

Detail of a gold light body with longitudinal light strips and a circular control

Horizontal pendant with parallel light strips, metal channels and end details against a dark background

Metal channels, luminous surfaces and circular controls explain different roles. Renderings support comparison of reflection and proportion; optical performance requires testing.

Check the object against the room

Gold vertical wall light within a grey architectural recess

Horizontal linear pendant above a dining table and chairs

Wall recesses and long tables provide scale references. Scenes help compare length, mounting and visual centre in an actual use context.

02

HUHU CARE · Pediatric Breath-Test Concept

A pediatric breath-test design study using balloon interaction, a handheld form and light feedback to explore a more approachable examination experience.

My role

Collaborative work

Stage

Concept and design proposal

This page is a concept, prototype or research record in the personal archive; visual material is not treated as proof of official collaboration, production, launch, performance or commercial outcomes.

Credits and context / Level C

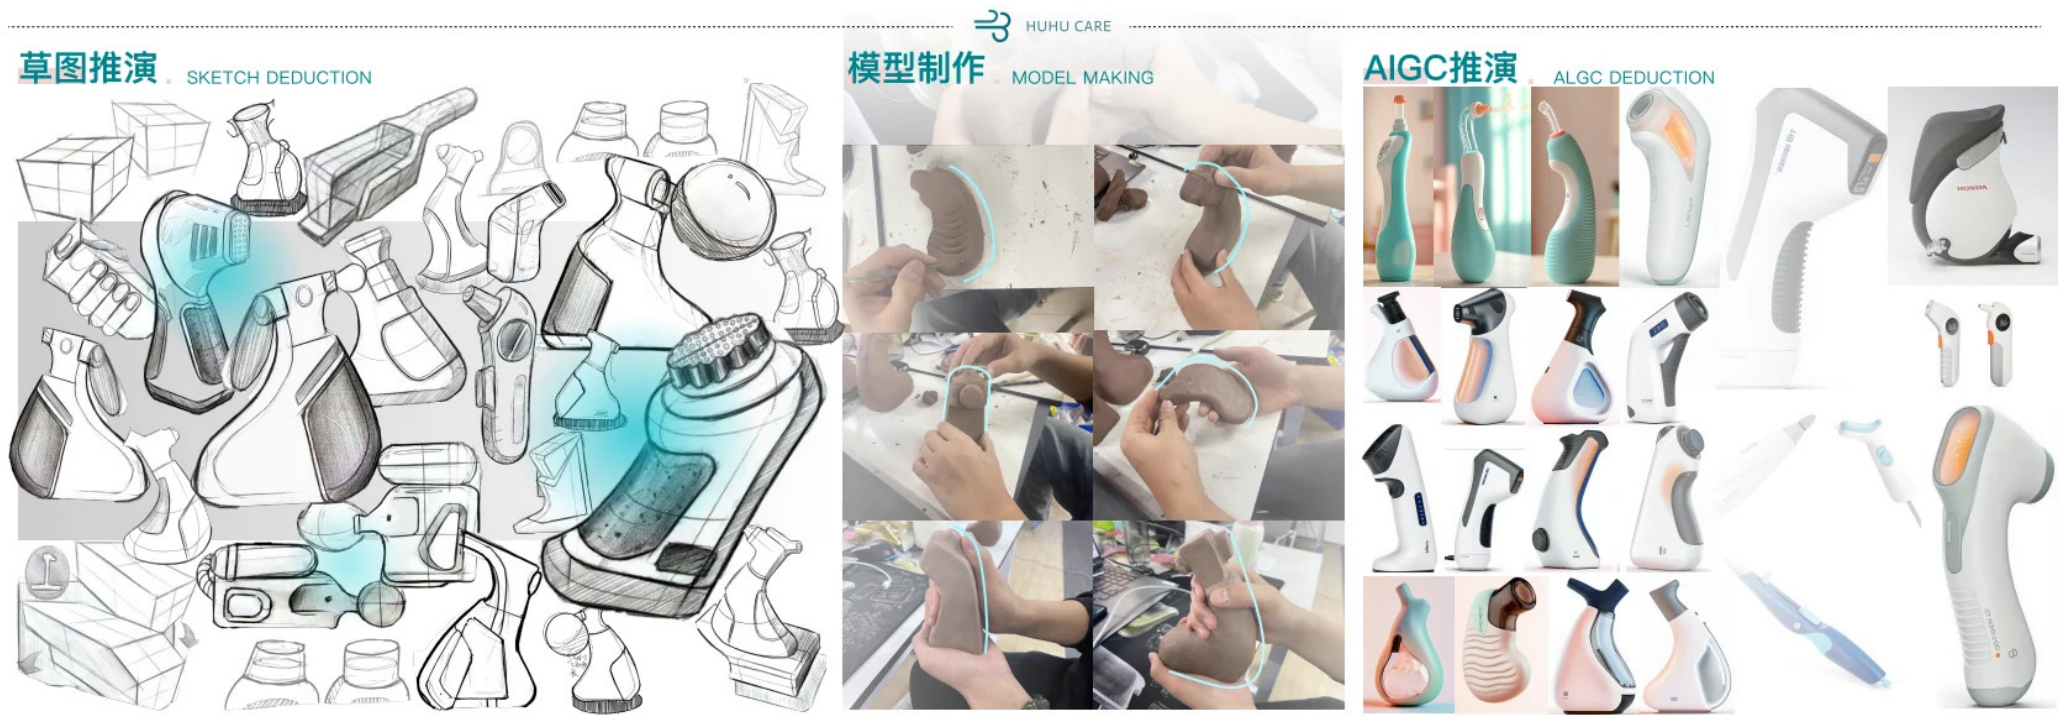

Collaborative project; original board information is preserved with the work

AI / Human: AI is described only where the current project record supports it; humans remain responsible for framing, selection, fact checking, design judgment and release.

Human review: Review of source, attribution and public permission; Human checks on design judgment, state and boundaries; Pre-release checks on assets, copy and links

[Read the complete case](#)

Turn a child's use into form constraints

Sketches, handmade form models and AIGC exploration

Sketches and physical models explore grip, mouthpiece position and approachability. Clinical performance and manufacture remain outside the validated scope.

Separate contact, grip and charging

Mouthpiece and connection

Textured grip area

Mouth contact, handheld volume and charging base have different requirements. Their separation makes the relationship between position and action available for review.

Connect the product and its feedback

Product and base arrangement

Proposed breath interaction and feedback sequence

The device and base form a use unit. Interface feedback addresses children, carers and clinicians. Models and renderings document the concept stage.

03

GO GLOW · Modular Personal Care

Connecting travel and daily care through module recognition, handling, storage, family form and a companion interface.

My role

Collaborative product concept & interface presentation

Stage

Concept and design proposal

This page is a concept, prototype or research record in the personal archive; visual material is not treated as proof of official collaboration, production, launch, performance or commercial outcomes.

Credits and context / Level C

Collaborative project; original board information is preserved with the work

AI / Human: AI is described only where the current project record supports it; humans remain responsible for framing, selection, fact checking, design judgment and release.

Human review: Review of source, attribution and public permission; Human checks on design judgment, state and boundaries; Pre-release checks on assets, copy and links

From travel preparation to maintenance

Packing, use and maintenance journey

Modular personal-care sketches

Carrying, changing modules, cleaning and storage create different tasks. The journey gives the product system concrete design criteria.

Organise the system around use

GO GLOW

让系列一致，让用途一眼可辨

设计逻辑 · 从成品与原稿中展开的决策解析

01 识别共性

白紫配色与手柄语言保持系列感
相同视觉秩序降低辨认负担

02 区分用途

牙刷、洁面与头皮护理端部各异
用接触几何区分模块功能

03 连接体验

模块名称与界面模式建立对应
从准备、使用到清洁收纳串联

从需求情境到系统表达

旅行情境

→

护理任务拆解

→

模块与草图

→

配套界面

→

系列与使用表达

产品形态与原稿保持一致；方案阶段为概念设计。

Organise the system around use

The handle, replaceable modules and supporting information respond to carrying, switching, cleaning and storage. The diagram analyses original concept evidence.

Connect the object and its instructions

Companion-app low- and high-fidelity screens

GO GLOW product-family render

The companion interface organises care guidance and module recognition. Naming, colour and hierarchy remain consistent across the product and instructions.

04

PLUMBER · Sewer Crisis 24h

A municipal maintenance concept combining a pipe-cleaning robot, an underground service station and a gamified control interface.

My role

Collaborative work

Stage

Concept and design proposal

This page is a concept, prototype or research record in the personal archive; visual material is not treated as proof of official collaboration, production, launch, performance or commercial outcomes.

Credits and context / Level C

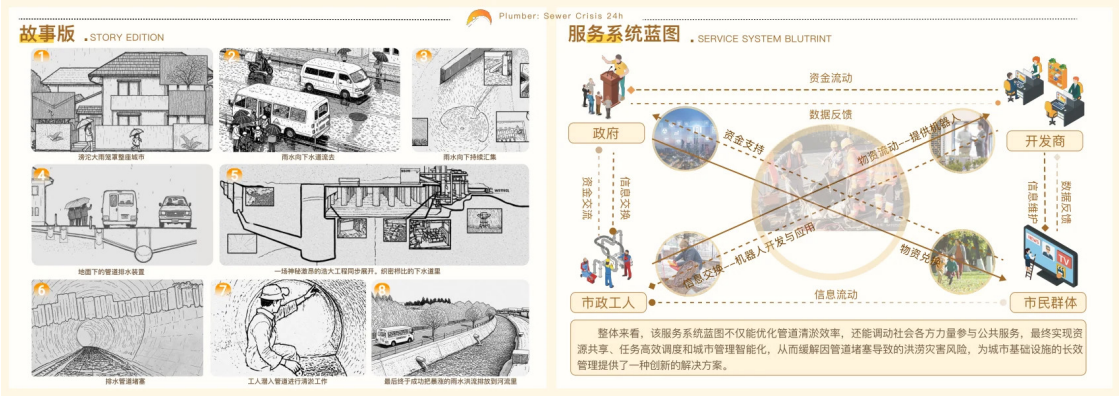

Collaborative project; original board information is preserved with the work

AI / Human: AI is described only where the current project record supports it; humans remain responsible for framing, selection, fact checking, design judgment and release.

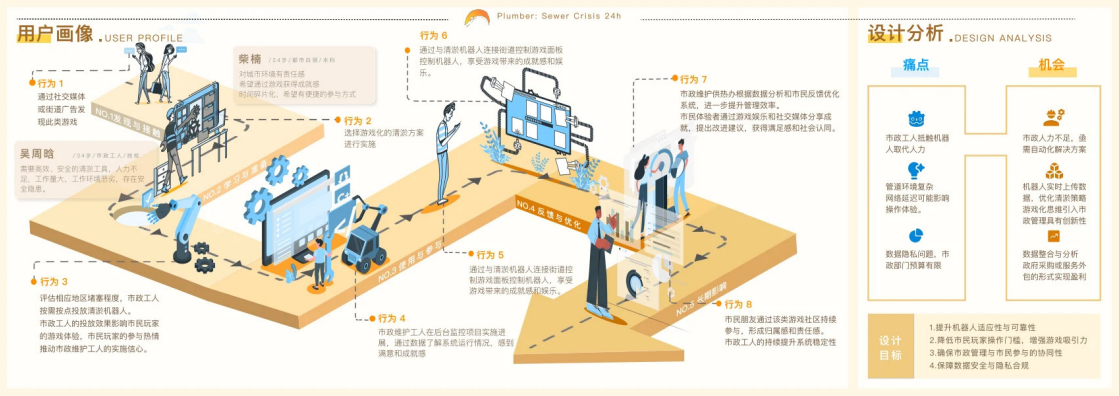

Human review: Review of source, attribution and public permission; Human checks on design judgment, state and boundaries; Pre-release checks on assets, copy and links

[Read the complete case](#)

Define the roles before the equipment

Storyboard and service-system blueprint

Roles and user journey

The service blueprint separates public participation, professional operation and equipment maintenance. Permissions and information flows frame the scanning, transport and return tasks.

Explain the robot through its parts

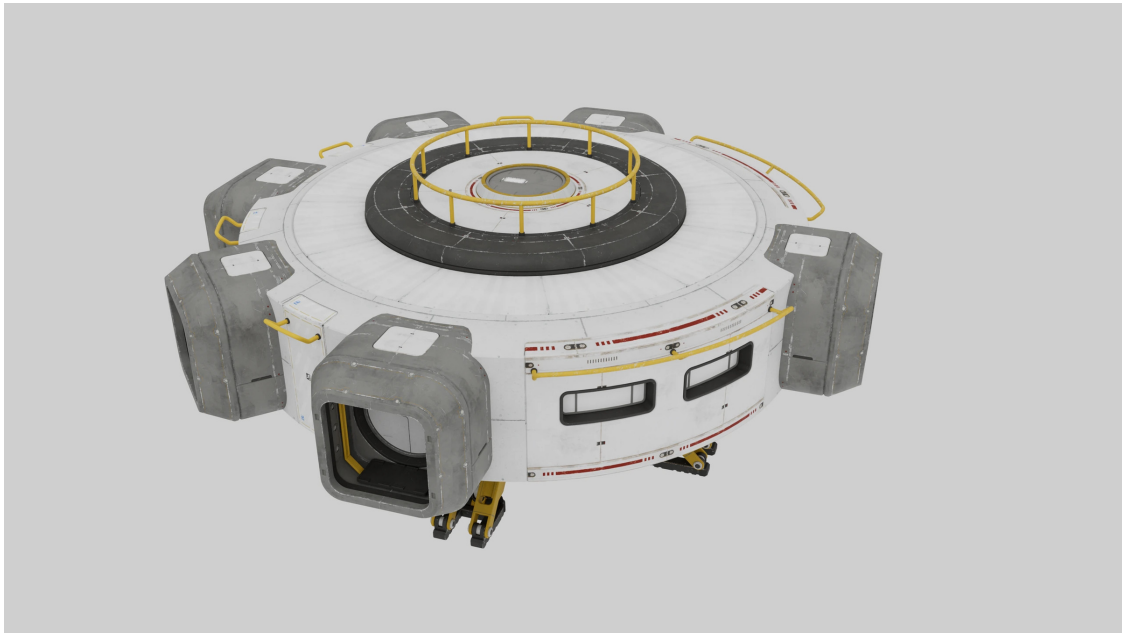

Robot three-quarter view

Robot exploded view

Overall and exploded views connect the body, actuators and tail. This concept does not establish sealing, power or pipe-traversal performance.

Connect equipment and interface

Underground service-station concept

Operation, monitoring and points screens

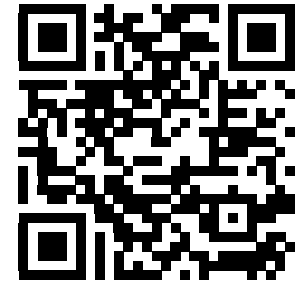

The station, device and control interface support parking, execution and monitoring. Their relationship makes it possible to review entry, feedback and recovery.
